## Features:

Power-Flo pumps are compact, lightweight powerful Portable Electric Submersible Pumps. They are whisper quiet and will perform in any position. Power-Flo pumps can be staged in series for higher head applications.

Power-Flo in-line design assures maximum heat transferred to the pumped liquid. Power-Flo pumps can operate in up to 140°F (60°C) temperature water. Power-Flo design provides the coolest operating motor for maximum life. Consult the factory prior to pumping fluids other than water for professional instructions

## Vacuum Pressure Impregnation "VPI" Sealed Insulation System

VPI motor enhancement system was developed to greatly extend the winding life expectancy of an electric motor. The motor stator is loaded into a pressure vessel and immersed in the specialty selected varnish. All gas pockets located within the stator are evacuated under vacuum. The varnish is drawn into the stator core, completely occupying all voids in the winding.

Following a series of processes, ending in a controlled bake, the winding is 100% impregnated and sealed. VPI is greatly superior to the "dip and bake" method which may provide only 50% to 70% of effective insulation leaving voids and air pockets. VPI provides 100% solid mass structure which provides the greatest mechanical strength and a cooler running motor due to superior heat dissipation.
